

AIOPS COPILOT

Empowering teams with AI-driven assistant.

Generate efficient architectures, detailed blueprints, production-ready code, and streamlined workflows.

What are the primary concerns that keep IT professionals awake at night?

What is the duration it takes for you to adopt new technologies such as Cloud, SaaS, and PaaS? How would you describe the progress and status of these adoption efforts?

How do you ensure that your environments adhere to and remain aligned with organizational and architectural standards, preventing any deviation or drift?

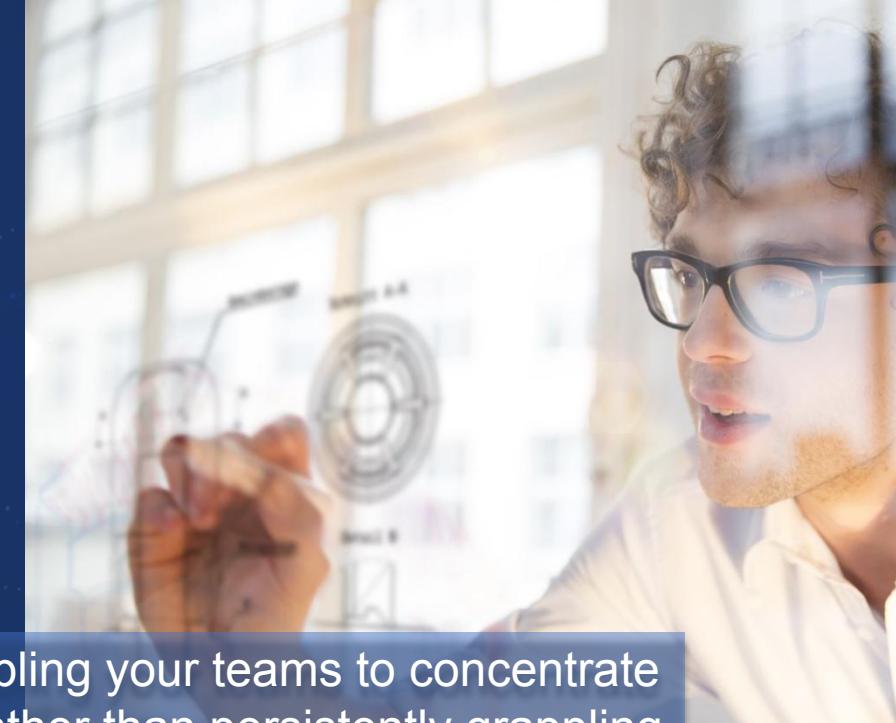

What strategies do you employ to effectively handle diverse deployment environments?

AIOPS Copilot Platform

Transforming organizations with industry changing AI-generated automation.

Technology adoption is happening too slowly. Often, the option of upskilling the workforce to match these advancements may not be feasible or timely enough. As a result, organizations face the daunting task of navigating a significant disparity between their existing skill sets and the demands of emerging technologies.

Our AI-driven technology has the capability to bridge this divide, enabling your teams to concentrate on delivering the necessary infrastructure and operational support, rather than persistently grappling with the complexities of emerging technological changes.

AIOPS Copilot Platform

Generate efficient architectures, detailed blueprints, production-ready code, and streamlined workflows.

Custom Architecture Corner

Generate custom architectures based on your enterprise environment and technology portfolio. Accelerate and evaluate new technologies adoption.

Visualizer

Import existing, build new architectures and blueprints on custom visual board.

Generation Engine

Generate and augment architectures and blueprints to code, deployment and operational workflows.

Insight Engine

Provide AI Assisted custom insights and augmentation on existing blueprints, code and workflows.

Custom Marketplace

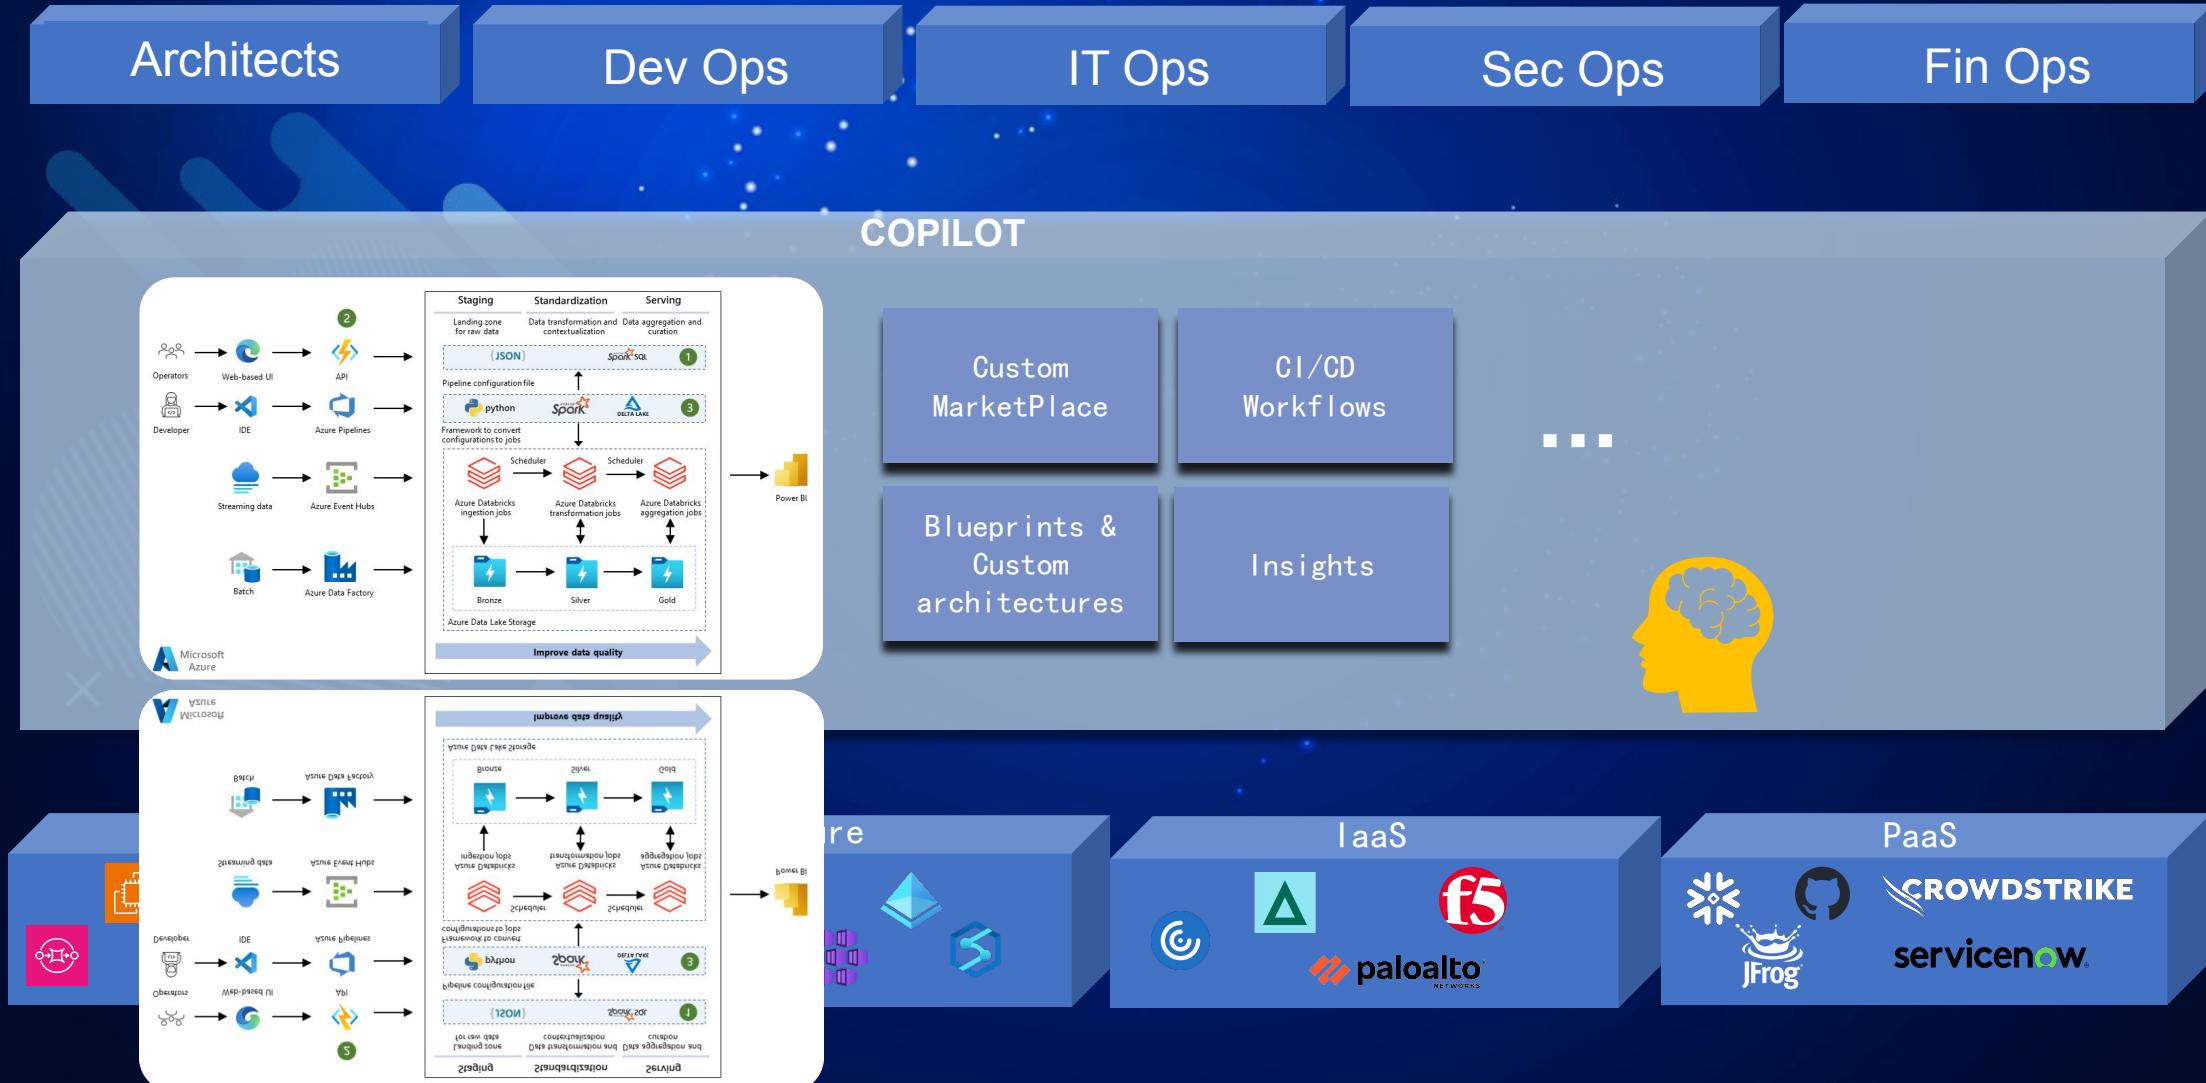

Create a personalized marketplace by leveraging custom architectural templates designed and verified by your own teams.

Cost Optimizer

Auto-tag resources, track licenses, track spending across portfolio, AI powered optimization and recommendations.

AIOPS COPILOT PLATFORM

Custom Architecture Corner

Adopt new technologies with industry changing AI

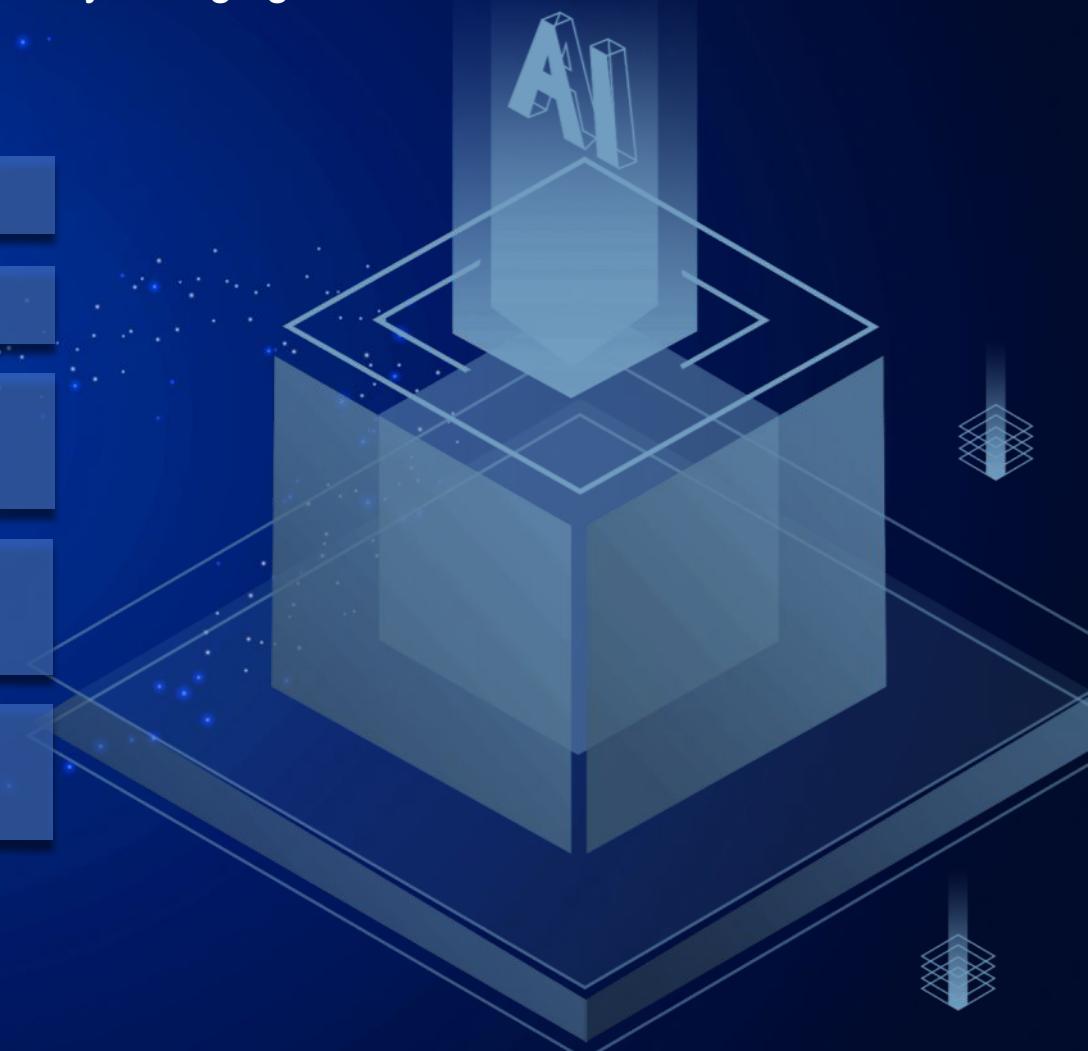

Reduce barriers to adopt new technologies

Accelerate automation and deployments with AI

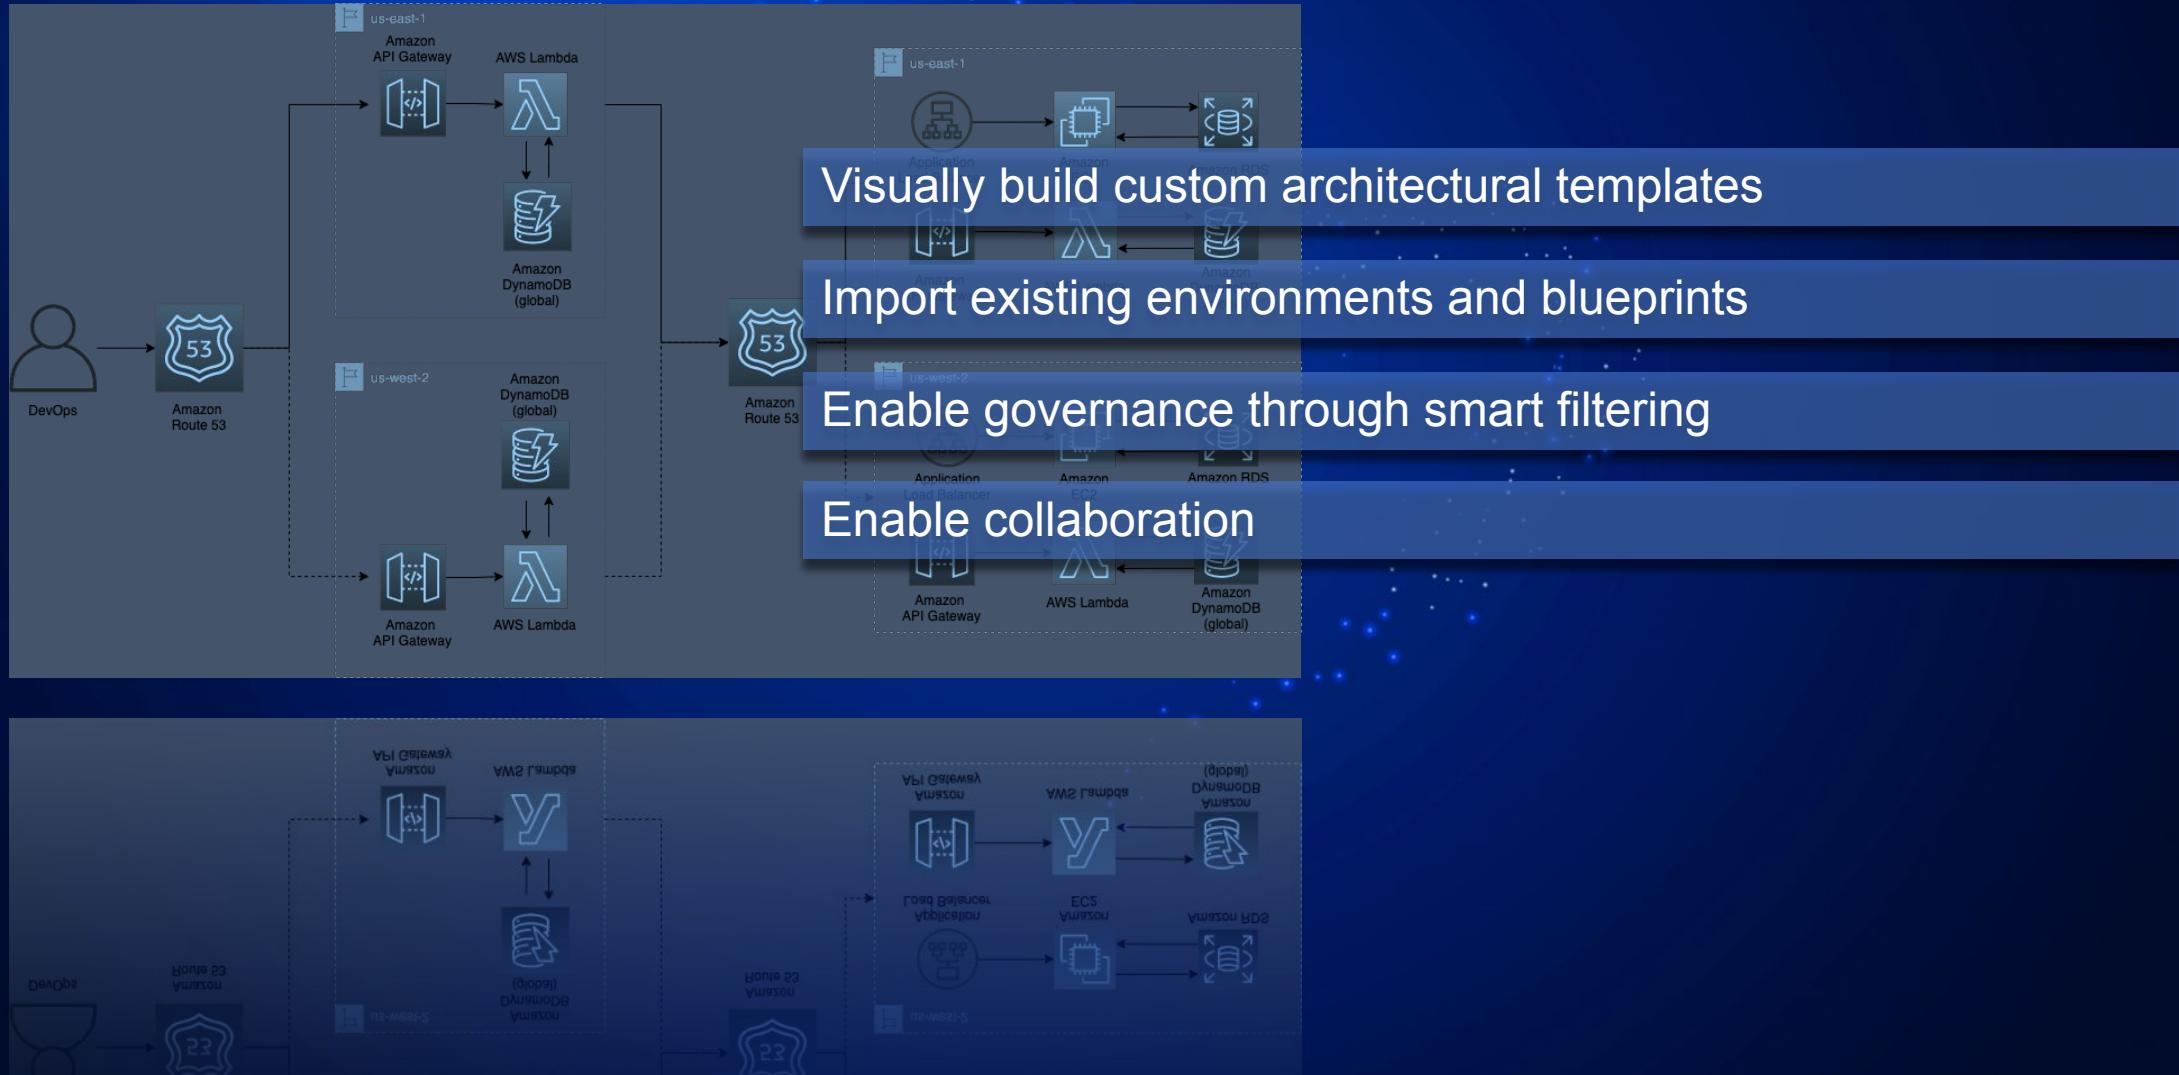

Maximize efficiency and productivity through automated workflows

Empower workforce through collaboration and custom marketplace

Embrace a future-ready mindset and propel your enterprise towards success with AI-driven technologies.

Visualizer

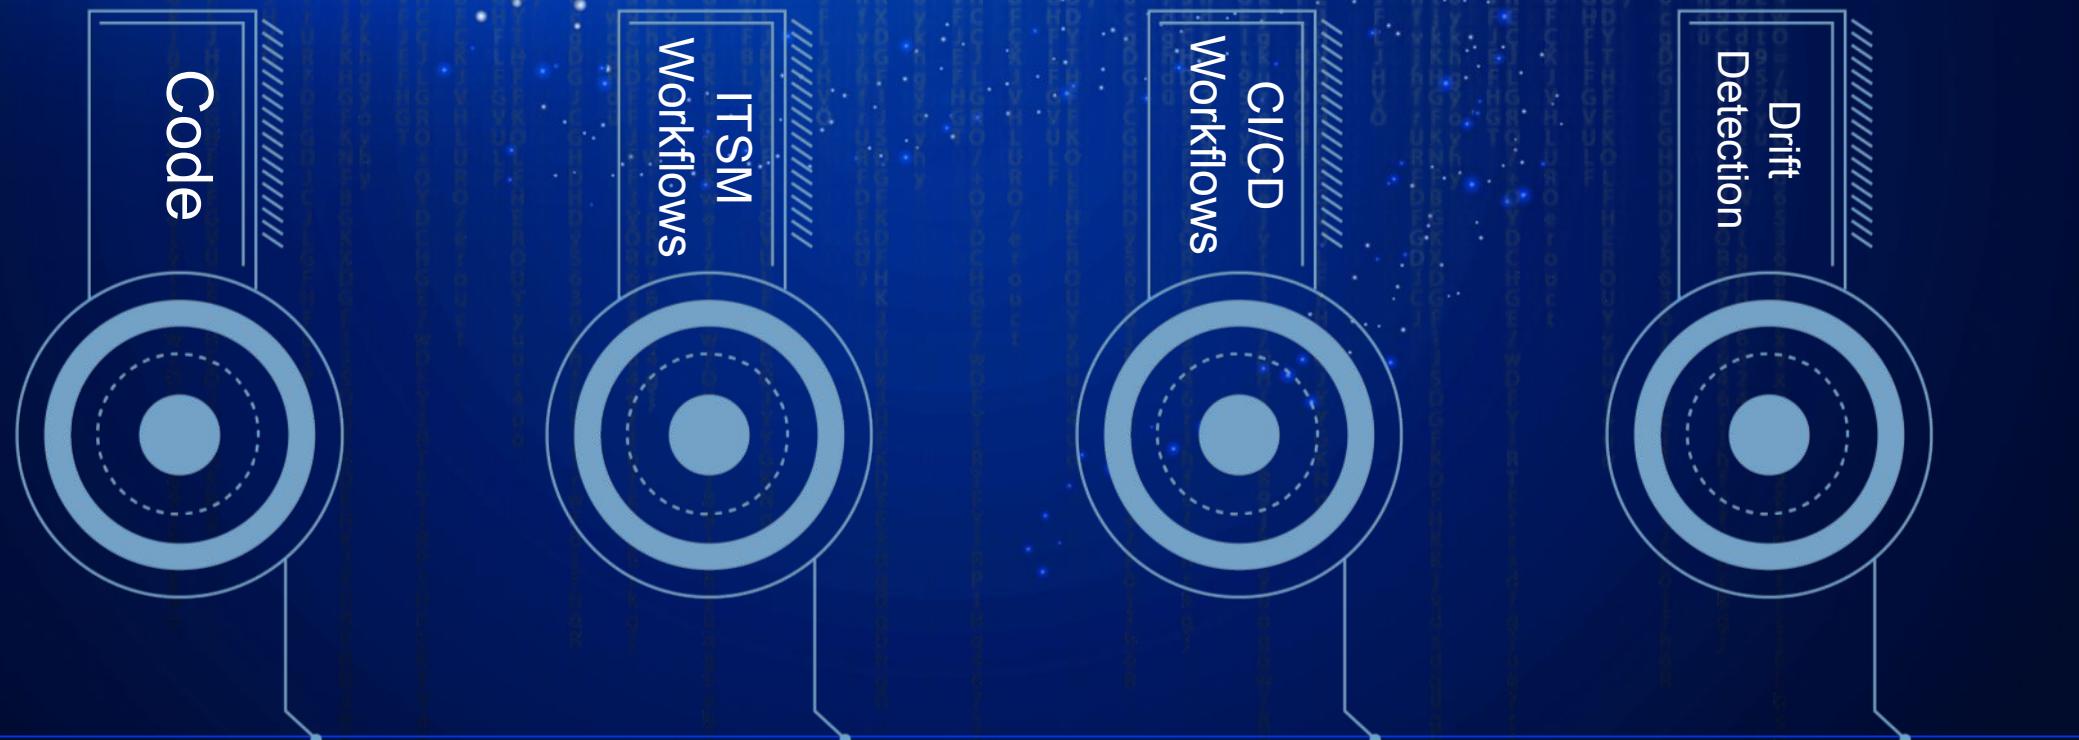

Generation engine

Auto generate deployment code from blueprints

Deployment and operational workflows

DevOps Workflows

Auto detect drift and reconcile

Insight Engine

Reliable & Scalable

Provide insights to make your environments reliable & scalable

Disaster Recovery

Distributed and fault-tolerant system design for improved resilience

Secure & Compliance

Provide security & compliance recommendations

Cost optimization

Review and optimize costs

Custom Market Place

Tailor-made application and architectural marketplace solution

Integrate and deploy with ITSM systems & CI/CD systems

Support versioning for Prod and Dev environments

Generate custom Blueprints to deploy from Marketplace

Extensive customization options for personalized marketplace experiences to control access, manage licenses, cost etc

Cost Optimizer

Auto tag resources using custom policies and automation

AI powered cost optimization and recommendations

Track product licensing

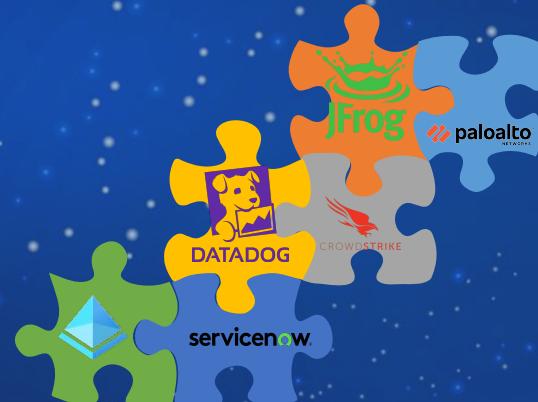

Track granular spending per environment

Provide cost estimation

Integrate with existing products

Import EKS

VISUALIZER
CANVAS

Generate Terraform Modules

Access to Jfrog registry

Secure with Crowdstrike

Monitor with Datadog

Networking with AWS VPC
CNI Plugin

Setup ingress controller behind
Firewall for North-South Traffic

Access controls using Azure
AD

Setup DR

Integrate with DNS

Conform to cost tags

Publish to review

Publish to Market place

Generate workflow to deploy
using CI/CD

Generate workflow to deploy
using ServiceNow

Your Enterprise Technology portfolio
